23. (Retyped) An arrangement comprising
an electric motor (10; 10'), adapted for driving a fan
(73), a microprocessor (12), for influencing at least one motor
function, there being associated with that microprocessor (12)
a volatile memory element (330) and a nonvolatile memory element
(14), said memory elements being configured for storing
at least one object as a definition for that motor function;
an interface (13a), associated with the electric motor, for a
data line (13; 210, 226) for transferring that at least one object
between said microprocessor and a memory element (14, 330), and
a stored directory (280), associated with the microprocessor
(12), which contains, for objects that are transferable via the
data line (13, 210, 226), predefined parameters (286, 288, 290) for
the transfer of those objects.
